

React UI Project Evaluation Questions

1. Describe the React project you worked on. What was the purpose of the application and what was your role in the project?
2. Explain the folder structure of your React application. Why did your team organize the project in that way?
3. How did you divide the UI into React components? Give examples of reusable components you created.
4. How did you manage data within the application? Explain where you used State and where you used Props.
5. Did your application consume data from a backend API? Explain how you called the API and displayed the data on the screen.
6. How did you handle loading states and error messages when fetching data from APIs?
7. Explain how you implemented forms in your project. How did you capture and validate user input?
8. Did your application have multiple pages? If yes, explain how routing and navigation were implemented.
9. What challenges did you face while developing the UI? How did you troubleshoot and resolve those issues?
10. Explain how you handled user events such as button clicks, form submissions, or dropdown selections.
11. Did you use any third-party libraries in your project? Explain why they were needed and how they helped.
12. How did you apply styling in your application? Did you use CSS, CSS Modules, Bootstrap, Material UI, Tailwind CSS, or another approach?
13. Explain how data flows from a parent component to a child component in your project. Provide a real example.
14. What steps did you take to make the UI responsive for mobile and tablet devices?
15. Describe a feature that you implemented completely by yourself. Explain the design, implementation, and testing process.
16. How did you debug issues in your React application? Which browser tools or techniques did you use?
17. What is the difference between `useState` and `useEffect`? Where did you use them in your project?
18. Explain how you optimized the performance of your application. Were there any slow screens or rendering issues?
19. If a user reports that data is not appearing on a screen, how would you investigate and

troubleshoot the problem?

20. If you were asked to improve your project today, what changes or enhancements would you make and why?
